- Thank you for Supporting the Alamance County 4-H Spring Plant Sale.**
- Your purchase helps support 4-H-ers' activities in several ways. 4-H-ers can earn Clover Cash by selling plants, and this money can help pay for camp, Summer Sizzle, teen events, and more. Our fundraisers help build up the scholarship fund so we can continue to make awards from it. The sale also helps to fund activities such as school enrichment, summer programs, and other County events throughout the year. For more information, check out our website @ <https://alamance.ces.ncsu.edu/>
- ◆ Order period:
February 19 - April 6
Payments (cash or check) must accompany order.
 - ◆ Payment and pick-up location:
209-C N. Graham-Hopedale Rd.
Burlington, NC 27217
 - ◆ Pick-up dates and times:
April 18 through 20, 8:30 AM to 4:30 PM

Herbs and Ferns

<u>Basil</u>	Basil is a popular herb known for its flavorful and fragrant foliage.
<u>Citronella</u>	Not edible, but effective at repelling mosquitos.
<u>Lavender</u>	Edible perennial used in vinegars, jellies, and crafts.
<u>Lemon Balm</u>	Lemon-scented member of the mint family.
<u>Parsley</u>	Fragrant and flavorful herb used in salads, soups, stews, and sauces.
<u>Rosemary</u>	Used as flavoring in vegetable and meat dishes, as well as in teas, vinegars, and jams.
<u>Sage</u>	Seasons meat, egg, and vegetable dishes.

Boston Fern Lush green fern, commonly grown as a houseplant.

Rabbiteye Type Bushes

The Rabbiteye blueberry, *Vaccinium ashei*, is native to the southeastern United States. This species is tolerant of the heat and drought of the South and grows wild in southern Georgia, Alabama, and the Florida Panhandle. Rabbiteye blueberries are one of the most delicious fruits grown in the South. They are also one of the easiest of fruit plantings to grow. The plant is prized for its ornamental value of spring flowers and fall colors and is often used for edible landscapes in home gardens. One of the most important things to remember about starting rabbiteye blueberries is to plant more than one variety for cross-pollination to promote higher fruit production. Rabbiteye varieties have been bred for years, making even more varieties available.

Climax - Producing medium-size berries with a sweet flavor, Climax is an early ripening plant. These plants are upright with an intense green foliage. Climax is one of the very best blueberry plants for harvesting.

Columbus - Being an early- to mid-season producer of excellent sized fruit, Columbus is a rabbiteye that needs a pollinator to go along with it to boost its production.

IRA - IRA is a self-fertile plant with a vigorous upright growth pattern. This rabbiteye is a mid- to late-season producer of medium-size light blue fruit.

Onslow - One of the largest berries produced by a rabbiteye type comes from an Onslow blueberry plant. Being a self-fertile, vigorous grower Onslow is a mid- to late-season producer, with semi-upright large fruit.

Powder Blue - A popular plants due to its larger sweet fruit, Powder Blue is late season in ripening; however, it is highly productive. This is an upright plant with good foliage.

Premier - Early- to mid-season, Premier produces large excellent-flavored fruit that is light blue in color and of a good quality. These plants are upright in growth with good foliage, and an overall highly productive variety.

Tifblue - Tifblue is an upright vigorous grower producing medium- to large-size berries of good quality. Mid-season in ripening, Tifblue is rated as the best ornamental due to its bright red fall leaf color.

Southern Highbush Blueberries

These are hybrids of blueberries which grew wild when European settlers first arrived in the New World. New southern highbush cultivars were developed to grow in California and other climates with low chill hours. Southern highbush blueberries are low chill varieties and offer gardeners in California, the Sunbelt, and the Southeast region an opportunity to enjoy blueberries just like their northern neighbors. Southern highbush are specifically hybridized for superior fruit, soil adaptability, heat tolerance and low winter chilling. Southern highbush blueberry bushes offer gardeners unique foliage, bloom and plant characteristics that aren't found in the northern highbush. Some southern highbush are self-pollinating, but the berries will be larger if two varieties are planted together. These varieties have low winter chilling requirements. "Chilling" is a measure of accumulated hours of temperatures below 45°F in the dormant season.

Legacy - Mid- to late-season ripening with good fruit size and quality, Legacy is popular due to its upright growth and medium- to large-size fruit.

O'Neal - Being very early ripening, O'Neal produces large, medium-blue-colored fruit that is firm and good in flavor. This is a vigorous and upright grower.
