

4-H Plant Sale | Spring 2024

Terms: All plants sold are to be free from disease, insects and injurious pests. Alamance County 4-H is not responsible for the survival of plants and will not be responsible for the results secured in transplanting. Please follow proper planting guidelines. If you have any questions concerning proper ground preparation or planting methods, please contact the Cooperative Extension Office prior to delivery date.

Thank you for Supporting the Alamance County 4-H Spring Plant Sale.

Your purchase helps support 4-H'ers' activities in several ways. Our fundraisers help build up the scholarship fund so we can continue to make awards from it. The sale also helps to fund activities such as school enrichment, summer programs, and other 4-H events throughout the year. For more information, check out our website @ <https://alamance.ces.ncsu.edu/>

Rabbiteye Bushes | One-Gallon Pots

The Rabbiteye blueberry, *Vaccinium ashei*, is native to the southeastern United States. This species is tolerant of the heat and drought of the South and grows wild in southern Georgia, Alabama, and the Florida Panhandle. Rabbiteye blueberries are one of the most delicious fruits grown in the South. They are also one of the easiest of fruit plantings to grow. The plant is prized for its ornamental value of spring flowers and fall colors and is often used for edible landscapes in home gardens. One of the most important things to remember about starting rabbiteye blueberries is to plant more than one variety for cross-pollination to promote higher fruit production.

Brightwell - Brightwell is an early- to mid-season ripening berry with sweet flavor that is light blue in color. Brightwell growth is upright and vigorous.

Columbus - Columbus yields early- to mid-season fruits with excellent fruit size and good flavor. Columbus generally produces a good yield.

Onslow - Onslow produces one of the largest rabbiteye berries. Onslow is a self-fertile, vigorous grower. Onslow is a mid- to late-season producer with semi-upright large fruit.

Powderblue - Powderblue is a late-season, highly productive blueberry plant with medium to large sweet fruit. Plants tend to grow upright with good foliage.

Premier - Early- to mid-season, Premier produces large excellent-flavored fruit that is light blue in color and of a good quality. These plants are upright in growth with good foliage, and an overall highly productive variety.

Tifblue - Tifblue is an upright vigorous grower producing medium- to large-size berries of good quality. Mid-season in ripening, Tifblue is rated as the best ornamental due to its bright red fall leaf color.
